CLAIMS

I claim:

- A light fixture, comprising:
- 2 a cowl comprising an open end, a closed end, and an inner surface forming a cavity;
- a socket positioned within the cavity and coupled to the inner surface
 of the closed end of the cowl, the socket being capable of receiving a base
 of a lamp:
- a collar coupled to the cowl completely within the cavity formed by the 8 cowl, and comprising an internal surface, an external surface, an inner aperture comprising a diameter at least capable of receiving the base of the
- 10 lamp and a perimeter that follows contours of the inner surface of the cowl; a lamp coupled to the socket, the lamp comprising a base and at
- 12 least one contact; and
- a stem coupled to the cowl for supporting the cowl so that the open end of the cowl faces generally downward.
- The light fixture of claim 1, wherein the collar is coated with a
 corrosion-resistant coating.
- The light fixture of claim 2, wherein the coating is a powder
 coating.
 - 4. The light fixture of claim 2, wherein the coating is paint.
- The light fixture of claim 2, wherein the coating is a reflective
 finish.

2

4

- The light fixture of claim 2, wherein the coating is applied only
 to the inner surface of the collar.
- The light fixture of claim 1, wherein the cowl comprises a crown
 portion and a skirt portion, the skirt portion comprising a generally conical cross-section, a first open end and a second open end, whereby a diameter
 of the second open end is larger than a diameter of the first open end, and the crown portion comprising a generally cylindrical cross-section, an open
 end and the closed end of the cowl, whereby the open end of the crown portion is coupled to the first open end of the skirt portion.
- 8. The light fixture of claim 1, wherein the lamp further includes at2 least one bayonet pin coupled to the base of the lamp.
 - The light fixture of claim 1, further comprising an O-ring coupled to the lamp and contacting the collar for sealing the inner aperture, the O-ring comprising an inner diameter approximately equal to an outside diameter of the base of the lamp.
- The light fixture of claim 1, further comprising a spring having
 an outer diameter adapted to closely fit within the sprocket, the spring capable of providing a force for holding the at least one contact in electrical
 connection with the socket.
- 11. The light fixture of claim 1, further comprising a head fitting2 coupled to the cowl for attaching the cowl to the stem.
- 12. The light fixture of claim 1, wherein the collar is sealed to the2 inner surface of the cowl.

- 13. The light fixture of claim 12, wherein the collar is sealed usinga silicone sealant.
- 14. The light fixture of claim 12, wherein the collar is sealed using2 an O-ring.
- 15. The light fixture of claim 1, further comprising a ground spike2 coupled to the stem.
- 16. The light fixture of claim 1, wherein the stem is coupled to the2 cowl at the closed end.
- 17. The light fixture of claim 1, wherein the stem is coupled to the2 cowl on a side surface of the cowl.
 - 18. A light fixture, comprising:
- 2 a cowl comprising a crown portion and a skirt portion, the skirt portion comprising a generally conical cross-section, a first open end and a second
- 4 open end, whereby a diameter of the second open end is larger than a diameter of the first open end, and the crown portion comprising a generally
- 6 cylindrical cross-section, an open end and the closed end of the cowl, whereby the open end of the crown portion is coupled to the first open end
- 8 of the skirt portion:
- a socket positioned within the cavity and coupled to the inner surface

 of the closed end of the cowl, the socket being capable of receiving a base
 of a lamp:
- 12 a collar coupled to the cowl completely within the cavity formed by the cowl, and comprising an internal surface, an external surface, an inner
- 14 aperture comprising a diameter at least capable of receiving the base of the lamp and a perimeter that follows contours of the inner surface of the cowl,
- 16 wherein at least a portion of the collar is coated with a reflective coating;

5

a lamp coupled to the socket, the lamp comprising a base and at least one contact; and

a stem coupled to the cowl for supporting the cowl so that the open 20 end of the cowl faces generally downward.

- 19. The light fixture of claim 18, wherein the reflective coating is a2 powder coating.
- The light fixture of claim 18, further comprising an O-ring
 coupled to the lamp and contacting the collar for sealing the inner aperture, the O-ring comprising an inner diameter approximately equal to an outside
 diameter of the base of the lamp.
